## chenille

Technically advanced upholstery fabrics made of chenille fibres consisted of two simple twisted-together threads, between which are another cut fibres. Owing to that - fabric has a structure similar to that of velour or plush. A typical feature of the chenille - is an irregularity of upper structure, tiny irregular clearances, and downiness. It is a pile fabric and will flatten as a characteristic. For optimal appearance retention, regular light vacuuming or brushing with a soft brush is necessary.

## velours

SITS

Elegant upholstery fabrics are most frequently produced in manufacturing two-layer knitted fabric, intertwining the layers with fibres creating a tick mesh, and then cutting up both layers. In this way, each of the layers has a thick fleece. The most recognizable feature of velour is its very high strength - at the same time, it gives a pleasant touch feeling.

## bouclé

Bouclé is both a yarn and a fabric made from it. The yarn is made from length loops of similar size that range from tiny circlets to large curls. It is nubby fabric - to make bouclé, at least two strands are combined, with the tension on one strand being much looser than the other as being connected to its plies. Loose strands form loops; the other strand is an anchor for the previous one. Bouclé is also a name of the fabric produce from this type of yarn, especially fabric that maintains the looped appearance.

## Every sofa can save 250 liters of water with Rolefin.

Rolefin is a textile-recycled olefin yarn developed to produce furniture fabrics a Zero Water Consumption during the production process. The yarn/fabric is converted from pre-consumer textile wastes consisting of by-product materials from fiber, yarn and fabrics.

### ROLEFIN has all the FOLLOWING features:

- Zero Water Consumption During Production Processes
- Made of Textile Wastes- Recycled
- Recyclable (up to 7 times)
- Contains No Harmful Chemicals
- Energy Efficient
- Low CO Footprint 2
- Certified by Recycled Claim Standard 2.0

**\*Eco friendly** All materials are biodegradable, recyclable. All waste are recycled. Energy and water consumption are minimised. No toxic products during production.  
**Washable** according to graphic instruction.

## Fabric you can clean with just water.

Enjoy the everyday comfort provided by Aquaclean® Technology. Now you can get rid of small stains such as wine, coffee and food without having to wash with soap or detergent. Aquaclean® Technology is so effective that even stains from most marker pens comes off with just water!

## Water cleaning in three simple steps:

Remove any excess residue on the upholstery by careful scraping of the stain surface. (Make sure not to use a sharp object to prevent ripping the fabric).

Apply water over the stain, either directly or using a damp cloth. Wait a few seconds.

Press down over the stain with a damp cloth and rub gently over the fabric in circular movements. If the stain does not come off completely, repeat the process as required.

\*Washable according to graphic instruction

Easy to clean an easy way to remove a stain - suffice rub with a damp cloth and soapy water.

Eco friendly all materials are biodegradable, recyclable. All waste are recycled. Energy and water consumption are minimised. No toxic products during production.

Safe front protects against viruses and bacteria.

The beauty of, sustainable, everyday products **made from upcycled marine plastic.**

SEAQUAL INITIATIVE works with NGOs, fishermen, authorities and local communities to help clean our oceans. Marine litter from our beaches, ocean floor and surface, rivers and estuaries, is collected by clean-up programs. It is then sorted into different material types and the plastic portion is cleaned and transformed into Upcycled Marine Plastic. Environmentally conscious brands and manufacturers then transform this new, fully- traceable raw material into inspiring sustainable products for every aspect of our lives. Consumer purchasing power is one of the most powerful tools for change. In choosing products containing Upcycled Marine Plastic, you are helping to clean our oceans.

## chenille

Technically advanced upholstery fabrics made of chenille fibres consisted of two simple twisted-together threads, between which are another cut fibres. Owing to that - fabric has a structure similar to that of velour or plush. A typical feature of the chenille - is an irregularity of upper structure, tiny irregular clearances, and downiness. It is a pile fabric and will flatten as a characteristic. For optimal appearance retention, regular light vacuuming or brushing with a soft brush is necessary.

Sky is made of 100% recycled waste, including upcycled cotton from garments and recycled PET from waste. Recycled PET is converted into yarns. This way we create this eco-friendly upholstery fabric. Ultimately these recycled yarns are transformed into soft, beautiful, recycled fabrics.

from PET to fabric

### PET bottles

Post-consumer PET bottles are collected from the ocean by fishermen or originate from different households.

### Flakes

Those used PET bottles are sorted by color and then transformed into flakes.

### Pellets

Once the flakes are sorted, they are melted to pellets.

### Yarn

Next in this recycling process, these pellets are spun into yarn.

### Fabric

Here is where we step in create our ecological Greencare fabrics from recycled yarn.

\*Easy to clean an easy way to remove a stain - suffice rub with a damp cloth and soapy water.

Eco friendly all materials are biodegradable, recyclable. All waste are recycled. Energy and water consumption are minimised. No toxic products during production.

Washable according to graphic instruction.

Recycled recycled materials.

Leather has specific features: such as texture, variations of hues, slight scratches, scars, pricks, and other marks that appeared before the process of tanning, which proves its natural origin. Furniture leathers are available in a few sorts that differ one from another, with thickness, finishing method, softness, and texture, which is palpable.

## REGULAR USE OF LEATHER FURNITURE

A natural process that accompanies the use of leather furniture is the appearance of folds, creases, and shining. An absolutely natural feature is the folds of back and seat pads. This process depends upon the insensitivity and quality of furniture use. It is recommendable to use all seats as evenly as possible to minimise the effects of that process.

## LEATHER PROTECTION

Leather protection long-lasting good appearance of a piece of leather furniture depends on the conditions in which furniture is using. What negatively influences the leather is high temperature, dry air, and direct exposure to harsh sunbeams. Such conditions are bound to shorten the life span of leather upholstery. The minimum distance between a piece of furniture and a source of heat should be 30 cm.

## LEATHER MAINTENANCE AND CLEANING

Leather furniture requires regular care. The method and frequency of cleaning, maintenance, and using intensity depend on the degree of soil. At least once per 6 months leather surface needs to be cleaned with a special preparation or with water and soft potash soap. It also needs to be maintained with a dedicated agent designed for leather care. Proper care and correct usage extend its perfect looks for many, many years.

Seamless comfort for both **indoor and outdoor** environments.

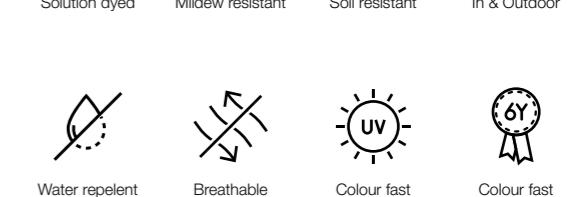

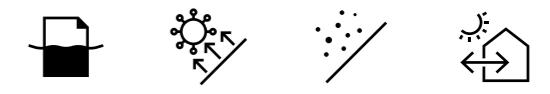

**The new and innovative Tempotest Home® LS fibre allows for previously unseen performance and top-quality fabrics that are aesthetic and functional for both INDOOR and OUTDOOR environments.**

Thanks to the innovative Teflon® Extreme finishing, Tempotest Home® LS fabrics are water/oil repellent, resistant to mould and stains, salt and fading due to solar radiation. Tempotest Home® LS fabrics are OEKO-TEX® certified. The fabrics produced with the new Tempotest Home® LS fibre are recognised for their high level of softness and appearance that is very similar to natural fibre products. These are characteristics and properties, never before achieved in outdoor fabrics.

### Warranty

Tempotest Home LS fabrics are guaranteed 6 years. The limited warranty only covers loss of colour due to normal exposure to solar radiation and normal weather conditions in general.

### A worry free care for outdoor furniture.

Enjoy the relaxed luxury of garden, pool-side and outdoor furniture that are just as easy to love as they are to keep clean. It feels great to have a drink, a snack or a swim in the sun, knowing that your furniture are protected by modern textiles that keep them in "ship-shape". With Easy Care Outdoor® fabrics life outside simply becomes easy and worry free for many years to come!

#### Easy Care

Quick and easy removal of common household stains using just water and mild soap. (Brush off loose dirt first).

#### Water repellent

EasyCare outdoor fabrics allow water to pass through them which ensures rapid drying.

#### Strong but Soft

- High resistance to wear and tear
- High abrasion
- Soft touch
- Pilling-resistant

#### Mildew resistant

Our fabrics are resistant to fungus. It is an intrinsic property of the yarns we use.

#### In & Outdoor

Our modern textiles are top of the line in terms of look and feel and can be used in- and outside the house.

#### Colour fast to light

Our fabrics meet the highest quality standards regarding fading due to UV rays. They are colourfast to chlorine, water, salt water, and sweat. We provide 5 year warranty on the fabric against fading from sunlight and UV rays.

There are possible shade differences between production series.

# ANILINE leather

1 latte

2 cognac

3 dark brown

4 natural

5 sand

6 opal

7 grey

8 black

**Characteristic** Pure Aniline is doubtlessly one of the softest leathers to the touch. It owes that feature to the finest selection of raw hides. It is a very exclusive product - only about 5% of upholstered furniture sold today is in it. This leather naturally breaths well - what makes even sitting for extended periods is comfortable from a touch and temperature perspective.

Aniline leather is the most natural leather, with the unique surface characteristics of the hide remaining visible. It is coloured only with dye and not with a surface coating of polymer and pigment. Furthermore, applying the colour leather process is as follows: the dye penetrating the leather and extending beyond the surface into the leather. The stains using in that process are clear and free from chemicals that allow the grain structure of the leather to be well visible. These dyes show the natural texture of the material. Unfortunately, they do not protect the leather from damages. These hides will exhibit some natural features, such as healed scars, scratches, neck and belly wrinkles, which gives them an original look. There are colour differences - between the swatches to the very same leather - it is because leather is a natural product and will absorb dyes differently within the hide and from hide to hide. This leather will develop a rich patina of wealth over time. Additionally, it will fade with prolonged exposure to sunlight. Due to the natural character of the leather, it is more exposed to dirt and stains - to prevent that process, you should regularly wipe it.

**Regular use of leather furniture** A natural process that accompanies using leather furniture is the appearance of folds, creases, and shining. An absolutely natural feature is the folds of back and seat pads. This process depends upon the insensitivity and quality of furniture use. It is recommendable to use all seats as evenly as possible to minimise the effects of that process.

**Leather protection** The long-lasting good appearance of a piece of leather furniture depends on the conditions in which furniture is using. What negatively influences the leather is high temperature, dry air, and direct exposure to harsh sunbeams. Such conditions are bound to shorten the life span of leather upholstery. The minimum distance between a piece of furniture and a source of heat should be 30 cm.
